

Unix Notes Class 16

Kate Ruiz (PID: A17671200)

Core Unix commands

Most unix commands have super short names, which makes them quick to type but annoying to learn. Major file system related commands include: pwd: Print working directory ls: list files and directories cd: change directory mkdir: make a new directory rm: remove files and directories (delete) super dangerous cp: copy files (source > destination) mv: move files or directories (basically rename) nano: a wee text command editor (very basic but always available)

AW EC2 Instance

Connect to my instance with:

```
ssh -i ~/Downloads/bimm143_kate.pem ubuntu@ec2-34-219-54-212.us-west-2.compute.amazonaws.com
```

Secure Copy files between machines, in this case from our instance to our laptop

```
scp -i ~/Downloads/bimm143_kate.pem ubuntu@ec2-34-219-54-212.us-west-2.compute.amazonaws.com:/home/ubuntu/
```
